Intra Hoof-fit Solves your Hoof problems

Intra Hoof-fit products enable dairy farmers, hoof trimmers and veterinary surgeons to deal with claw problems in a responsible and serious manner. There is good reason why Intra Hoof-fit Gel is the very first officially approved veterinary medicinal product without antibiotics to cure digital dermatitis in the world. In cooperation with many independent research institutes (like GD Animal Health, the Faculty of Veterinary Medicine of the University of Utrecht, and the University of Nantes, France), we have demonstrated that Intra Hoof-fit Gel is much more effective than antibiotic spray. This is very good news, since the use of antibiotics is under much pressure throughout the world. Currently Intra Hoof-fit Gel is the only alternative without antibiotics which may officially be used to cure digital dermatitis (Mortellaro's disease). This registration is a milestone in claw care throughout the world and Intra Hoof-fit Gel now has a wide range of users in more than 80 countries.

Intracare is now globally considered one of the leading authorities in claw care. The people at Intracare closely cooperate with claw experts of different nationalities. We share our knowledge and passion, translating it into practical products and solutions which are practicable for all dairy farmers.

Intra Hoof-fit now covers a whole range of products which can contribute to untroubled running of a dairy farm without claw problems. In addition, Intracare supplies more than just products and is committed to informing hoof trimmers, dairy farmers and veterinary surgeons about claw infection control. Intracare is well aware that solutions need to be practical without making them too complex. The solutions also need to be future-proof, in accordance with responsible management of a dairy farm meeting all government requirements.

Intra Hoof-fit offers a wide range of products allowing dairy farmers to choose the application for the approach of claw problems that appeals to them most. Every dairy farm has its own way of working and the approach of claw problems may be different from farm to farm.

- **Intra Hoof-fit Gel**

This super concentrated gel is officially registered as a veterinary medicinal product and is particularly suitable for curative use. With the gel, cows with serious claw problems are treated individually.

- **Intra Repiderma**

Intra Repiderma is a conditioning spray for the skin and claws. It keeps the skin and claws of dairy cattle in optimal condition.

- **Intra Hoof-fit Liquid**

Intra Hoof-fit Liquid is a care product for claws which can be used for both individual treatment of cows with claw problems and for herd treatments. Herd treatments may be carried out manually with a low-pressure spray gun when the animals are, for example, tethered in the feeding rack.

- **Intra Hoof-fit Clean & Control**

Intra Clean & Control is a product specially developed for use in footbaths for dairy cattle. It is a special disinfectant without formalin which is very effective against microorganisms causing claw problems.

- **Intra Hoof-fit Bath**

Intra Hoof-fit Bath contains conditioning ingredients necessary to keep the claws of dairy cattle in optimal condition. Intra Hoof-fit Bath may perfectly be combined with Intra Clean & Control.
